REASONS FOR ALLOWANCE

1. Claims 41-46 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

In interpreting the claims in light of the specification and applicant's arguments, the Examiner finds the claimed invention is patentably distinct from the prior art of record.

The prior art of record includes Shimizu, US Patent Application Publication No. US 2005/0038804, French et al. (French), US Patent No. 5,794,229, Suzuki et al. (Suzuki), US Patent No. 5,537,633, and Young et al. (Young), US Patent No. 5,280,575.

Shimizu discloses a database system that accommodates any type of registered information (phenomenon or things) with a simple table structure comprising category identification information of the content to be registered, item names that represent an attribute and/or a function included in the category, and attributes of data representing the substantial contents of these items (item data attributes) are registered in each data cell of a data property table in units of rows, and category identification information, title names, and substantial contents associated with each item are registered in data cells of a main data table in units of rows (Abstract). Shimizu further discloses there are a first table and a second table, which are formed by data cells (paragraph [0018]). Shimizu further discloses in the first table, category identification information and "item names and item data attributes" associated with that category are stored into each data

Art Unit: 2176

cell in units of rows, and in the second table category identification information, title names, and substantial contents associated with each of the item names of the information are stored into each data cell in units of row, and both of the stored data being associated by the category identification information (paragraph [0020]). Shimizu further discloses a first display means for reading out and displaying a first registration screen of storage means, the first table formed by data cells, a first registration means, which uses data cells of a specific column of the first table as a storage area for category identification information (paragraph [0025]). Shimizu further discloses a second display means for reading out and displaying a second registration screen, which generates a display method based on row-direction data associated with the category name of the first table, the second table formed by data cells, a second registration means which uses each data cell of two specific columns of the second table for category identification and title names and assigns each data cell of other columns a storage area for substantial contents associated with the item names (paragraph [0025]). Shimizu further discloses a data output means in which an inquiry is made with various conditions, based on data registered in the first table, generates an access method for the second table and an output method for registered data obtained by that access method, these methods causing output of registered data in response to the above inquiry (paragraph [0025]). Shimizu further discloses setting the registered data associated with the corresponding title name as data to be updated, and overwrites this data with the changed data (paragraph [0212]).

French discloses a customers table (logical view) can be displayed in an area as row-based (horizontal) data storage (Figure 3A), or column-based (vertical) data storage (Figure 3B).

Suzuki discloses in an input table in which different kinds of ruled lines are drawn horizontally and vertically as shown in Figure 9, the table is divided into four blocks by the horizontal and vertical lines, and of these four blocks, the cells contained in the upper right block and the lower left block are title cells, and this way the titles and element data are discriminated on the basis of the input table, and sets of title string and element data are generated (col. 7, lines 1-20).

Young discloses table contents portion may include one or more tables each defined by a table definition, and the table definition includes two portions, including a table header portion, which stores information concerning the table and a table rows portion which stores the actual table data (col. 5, line 61 – col. 6, line 11).

Claim 41 is allowed because the prior art of record does not expressly disclose alone or in combination as claimed in claim 41.

3. Claims 42-44 are further limit independent claim 41. Claims 45-46 are allowed for the same reasons set forth for claim 41.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
